

Project Initialization and Planning Phase

Date	15 March 2026
Team ID	SWTID-2026-9392
Project Title	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform digital storytelling and comic creation using multimodal generative AI, boosting creative efficiency and accessibility. It addresses the high entry barriers in illustration and scriptwriting, delivering consistent multi-panel visual storyboards, rich dialogue generation, and customizable layouts with real-time prompt generation.

Project Overview	
Objective	The primary objective is to revolutionize comic story creation by leveraging Google Gemini Multimodal models to automate script generation, panel decomposition, visual prompt crafting, and dialogue positioning for rapid visual storytelling.
Scope	The project comprehensively develops an interactive web platform that ingests raw user story ideas, generates structured comic scripts, generates style-consistent multi-panel artwork, and allows interactive editing and PDF export.
Problem Statement	
Description	Creating visual comics requires significant artistic skills, specialized software mastery, and extensive time for scripting, layout design, and illustration, limiting aspiring creators and storytellers.
Impact	Solving these challenges democratizes comic creation, reducing production time from weeks to minutes, allowing educators, writers, and artists to easily convert ideas into professional graphic stories.
Proposed Solution	
Approach	Employing Google Gemini 1.5 Pro and Gemini Flash models alongside diffusion artwork generators to interpret textual prompts, construct character-consistent panels, and render formatted speech bubble layouts seamlessly.
Key Features	- AI-driven story script and character arc generation. - Automated panel breakdown with scene and visual prompt mapping.

- Real-time speech bubble positioning and dialogue overlay editor.
- Multi-format export capabilities (High-resolution PDF, PNG storyboards, CBR).

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware	Computing Resources (CPU/GPU)	NVIDIA T4 GPU / Google Colab Pro
	Memory (RAM)	16 GB DDR4
	Storage (Disk Space for Assets & Models)	512 GB SSD
Software	Frameworks	FastAPI / Node.js Express
	Libraries & SDKs	google-generativeai, LangChain, Pillow, React.js, Tailwind CSS
	Development Environment	VS Code, Jupyter Notebook, Postman
Data / Models	LLM & Image Datasets	Google Gemini 1.5 Pro API, Gemini Flash, Comic Panel Prompt Dataset
